PR

HOW TO USE

## Main Components

## Features

\_\_\_\_\_

- ## Skin Rejuvenation

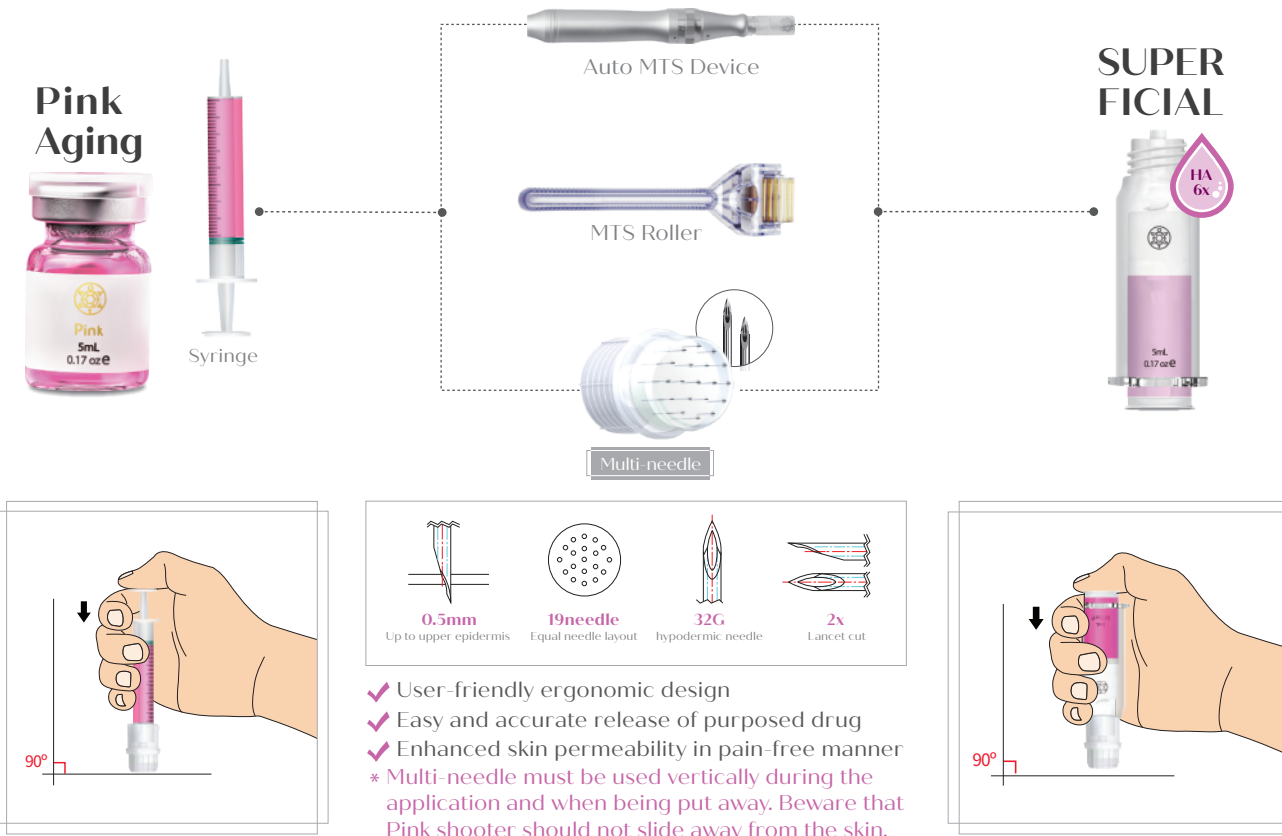

- ## Skin Moisturization

- ## Skin Energy Activation

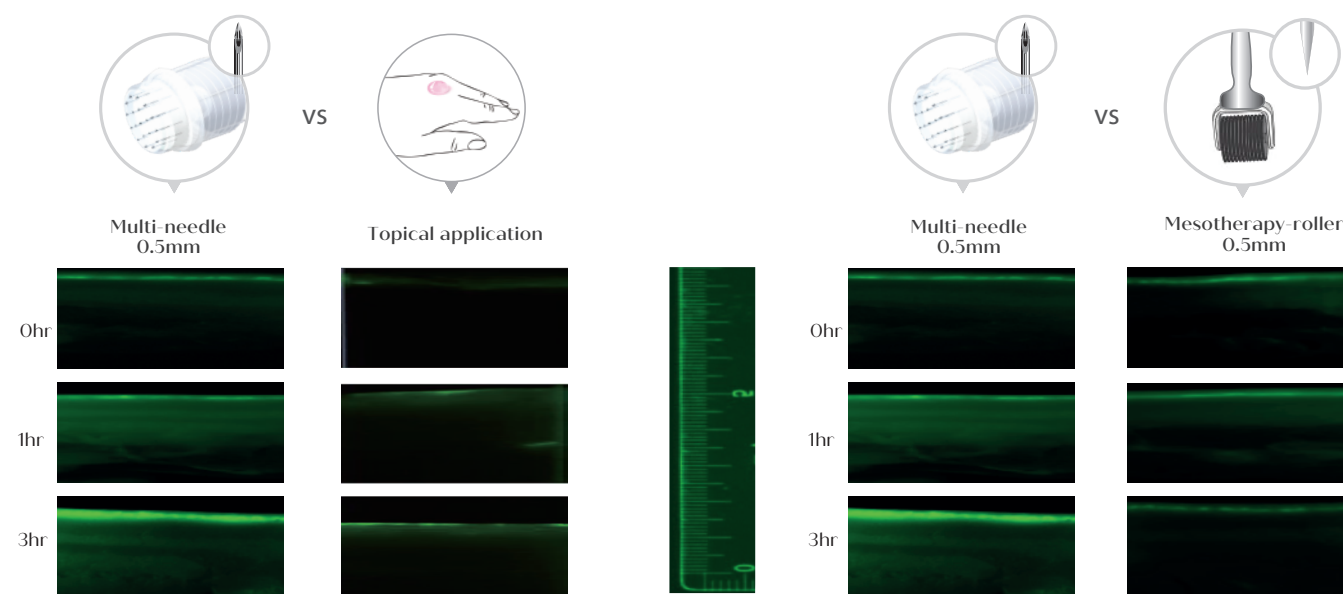

- ▶ Contains **vitamin B and amino acid** for coenzyme synthesis
- ▶ Contains **ubiquinone (coenzyme Q10)**, which is the connection for the production of ATP <sup>23</sup>

## Usage

The SUPERFICIAL Pink Aging, in particular, uses multi hollow needles that show a 30 times higher penetration rate of the solution compared to a topical application. This is achieved by a direct delivery system of  **TURTLEPIN**® and you will see faster and more significant results from the SUPERFICIAL Pink Aging . The Pink Aging Vial is another option available to meet various needs of professionals.

## Penetration Rate

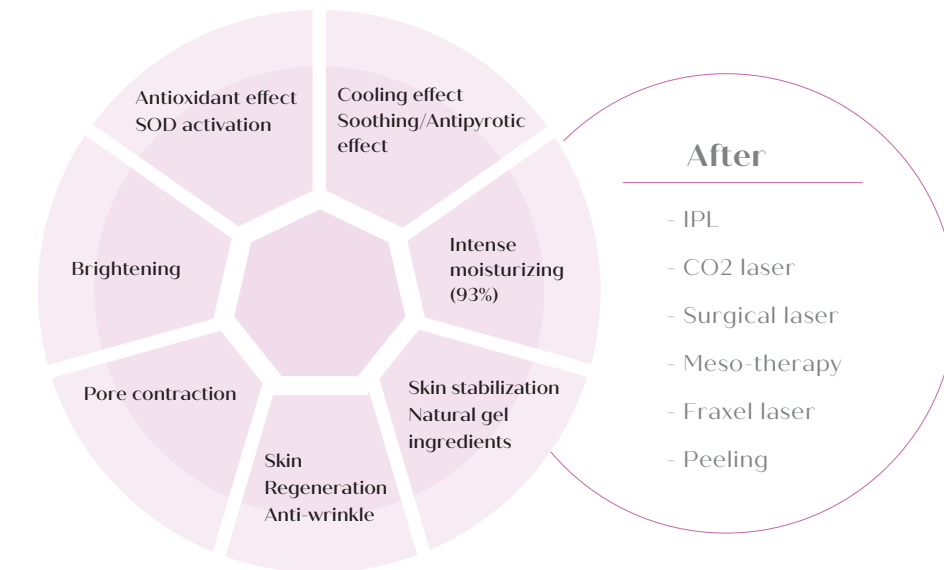

\*The use of **TURTLEPIN** series (both 0.5mm & 1.0mm) significantly results in better penetration rates of eGFP than in the use of MTS-Roller. [...] Considering the greater convenience and reduced pain experienced in the use of **TURTLEPIN**, it may be more suitable for mesotherapy – ideal for both patients and professionals. \*Korea Research Institute of Bioscience & Biotechnology (KRIBB, 2013). \*Comparison study of **TURTLEPIN** and mesotherapy-roller

"0.5mm shows higher FL intensity level (30x) and faster penetration speed(20x) in comparison to normal application (NC)." Korea Research Institute of Bioscience & Biotechnology(KRIBB, 2013), \*In Vivo&In Vitro -  TURTLEPIN

## VRX Post-Mask

**NRX Post-Mask** is used as an essential post-procedure mask sheet that effectively relieves the treated skin and maximizes the positive results from the Pink Aging procedure. It shall be used after peeling, MTS, IPL, FRAXEL, CO2 laser and all other various dermatological procedures that may stimulate and irritate the skin.

### Active ingredients

 Acetyl-Hexapeptide

Anti-wrinkle effect created by controlling secretion of Acetylcholine, which in turn affects muscle contraction in wrinkles through control of SNARE complexes Anti-ageing effect created by controlling excessive secretion of Catecholamine.

## Plant Stem Cell (Centella Asiatica)

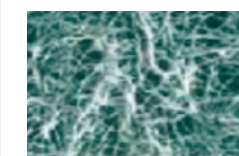

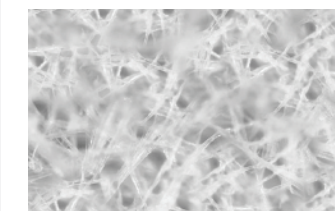

### Associate post-procedure skin regeneration

Accelerates healing process by stimulating proliferation and segmentation of fibroblast and dead skin cells.

**Bio-cellulose**

Nano-sized fibers originating from natural micro-organisms attached near irritated skin and pores. This enables the efficient delivery of active ingredients into dermis.

- Bio-cellulose [x200,000 magnification]
- 3 dimension net structure
- Fiber diameter: 0.002-0.05 microns
- High physical strength
- Strong absorption (non-woven fabric x 10)
- High density (non-woven fabric x 500)
